# Getting Started!

## Overview

---

Generate stunning product images instantly with AI using Google Gemini. Edit existing images, create variations, and visualize products in real-life scenarios, all directly within PrestaShop to save time and boost engagement.

## Installation Instructions

---

1. Go to Modules → Modules Manager → Click Upload a Module → Browse for Downloaded Module ZIP file and click Upload this module.
2. Click Proceed with Installation.
3. Make sure Cache is disabled in Advance Parameters → Performance.
4. Go to Modules → Modules Manager → AI Product Image to Configure the module

## User Guide

---

### Module Configuration:

After installing the module go to Module > Module Manager > AI Image Generator Module. Here you will see all the configuration for your module.

A screenshot of the 'AI Image Generator Settings' configuration page. The page has a light gray header with the title 'AI Image Generator Settings'. Below the header, there are three configuration fields. The first is 'API Key', which is a text input field with a red asterisk to its left. Below it is a small italicized note: 'Enter your Google Gemini API key. You can get one from the Google AI Studio.' The second field is 'Text-to-Image Model', which is a dropdown menu currently showing 'Nano Banana Pro (High Q)'. Below it is a small italicized note: 'Model used for generating images from text prompts'. The third field is 'Image Editing Model', which is also a dropdown menu showing 'Nano Banana Pro (High Q)'. Below it is a small italicized note: 'Model used for editing/modifying existing images'.

**API Key:** Enter your Google Gemini API key here

**Text to Image Model:** Select your nano banana model, each model has its own cost. Make sure to check your cost per image from Google Gemini’s dashboard

**Image Editing Model:** Select your nano banana model for image editing.

**Note: You need paid APIs.**

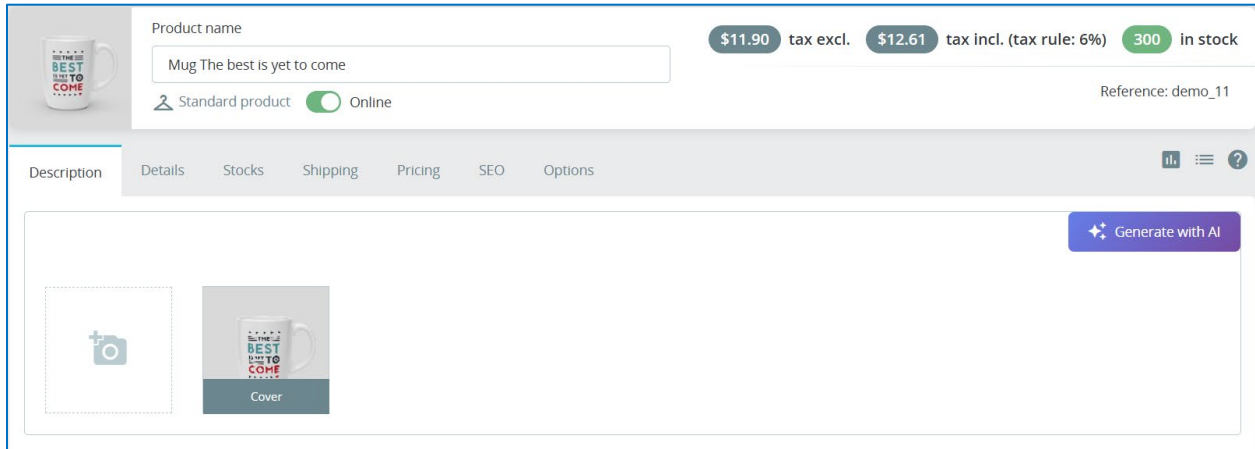

Gemini: Click [here](#)

**Note:** We can also integrate any other AI model of your choice subject to additional setup charges.

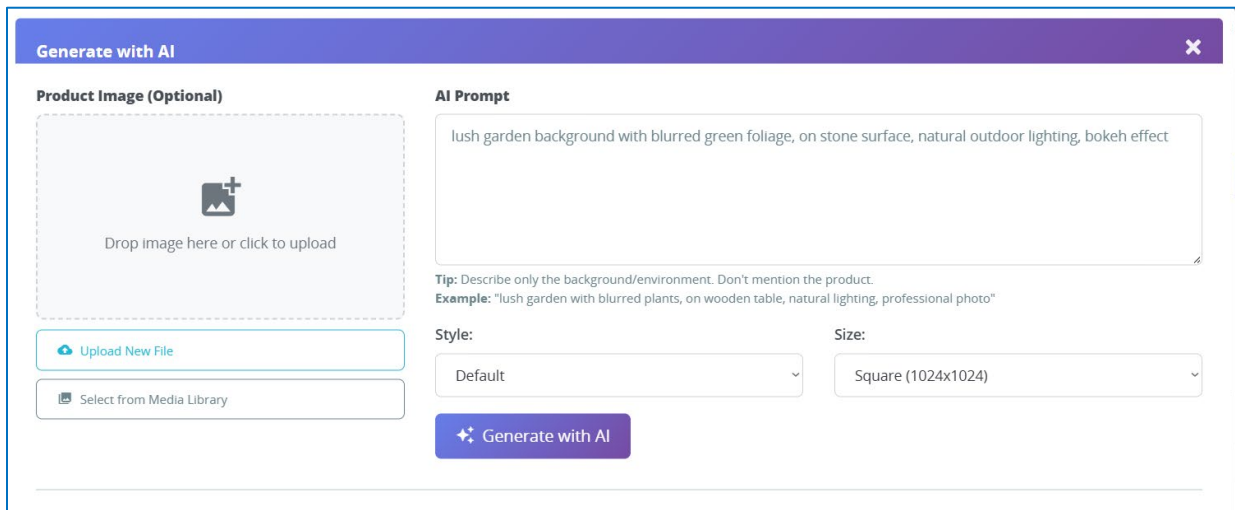

## How to generate AI Images

**Step1:** Go to Cataloge > Products > Edit any product. On the next page you will see a button allowing you to generate AI images.

**Step2:** Click on the “Generate with AI” button. This will open the dialog box to generate image. From here you can either upload image from your pc or select the current product. Click on “Select from Media Gallery” on left hand side to select the current image. Next you need to give the prompt and select image size. After that click on “Generate with AI” button in bottom that will generate the new image.

**Step3:** Once the image is generated. You have the option to save the image to gallery, insert it into the post, generate variation or download. Once you click Insert into post button, your generated image will be inserted into the post.

The interface shows a design process. On the left, a white mug is shown with the text 'THE BEST IS YET TO COME' in a stylized font. On the right, an arrow points to a photograph of a woman sitting on a rooftop terrace, smiling and holding a mug with the same design. Below the images, a prompt reads 'Prompt: Show a lady having coffee on a rooftop.' At the bottom, there are four buttons: 'Save to Media Library' (purple), 'Insert into post' (green), 'Generate Variation' (blue), and 'Download' (grey).

## Disclaimer

---

It is highly recommended to backup your server files and database before installing this module.

No responsibility will be taken for any adverse effects occurring during installation.

**It is recommended you install on a test server initially to carry out your own testing.**

## Support
