## Getting Started!

### Overview

---

Achieve your sales targets with Prestashop SEO Module, as it enhances search engine visibility of your online store by allowing you to automatically setup sitemap, robots.txt & Metas for home, products & other pages.

### Features

---

#### What this PrestaShop Advance SEO Module does for you?

PrestaShop SEO Module automatically configures the vital components of On-Page SEO. This plugin automatically creates Meta titles and keywords for CMS, Category and product pages based on its intelligent formula. It is a great helping aid for increasing website traffic and SERP rankings. It also offers URL redirects, Generate/Edit Robots.txt and Generation of Sitemaps.

Some of the prominent features are:

- Automatically **Set Meta Title & description** of your product, Categories & CMS pages in **Multilingual**
- Generate **Sitemap & Robots.txt**
- Configure & Enable **Google Social Profiles**
- Add **301, 302 & 303 Redirect**
- **Automatically find keyword** and optimize your store SEO
- Option to add **Product Cards** for **Facebook** and **Twitter**
- Manage **follow and indexing** for **CMS, Categories** and **Catalogue** pages
- Enable search engine **ping** after new **sitemap** generation
- Add product images from **CDN** for **sitemap** generation
- **Multi-Store** sitemap generation
- Product **URL rewrite** options

## Powerful Features of PrestaShop Advance SEO Module

The SEO module for PrestaShop store contains the following features:

- It allows configuration of title, description, and keywords all from one page
- The add-on dynamically uses the following formula to configure Meta title: 'product name' – 'product category' – 'shop title' for category & product pages of a website. 'Page title' – 'Shop Title' for CMS pages
- You can specify word limit as 1, 2, 3 or 4 to pick the keywords
- You can specify the number of occurrences for each word to pick the right keyword
- Increases SEO rankings and CTR
- Enable Google Search Box for your website
- Configure Google site name box for the store
- Allow the addition of Google profiles to your website
- Generate Robots.txt also edit Robots.txt option available.
- Generate Sitemaps in multiple languages also set a Cron job to auto generate it in future.
- Unlimited URL redirects option.
- Auto or manual Meta generator available.
- Sitemap generator
- Meta generator added for both auto and manual
- Meta generation through Cron job
- Back-office redesigned gave a nice look
- Multi-byte generator updated and improved
- Google site name option
- Option to add Product Facebook cards for SEO
- Option to add Product Twitter cards for SEO
- Option to manage follow and indexing options for CMS pages
- Option to manage follow and indexing options for CMS Categories
- Option to manage follow and indexing options for Categories
- Option to ping search engines for new sitemap
- Option to add product images from CDN for sitemap generation
- Multi-Store sitemap generation
- Product URL rewrite options
- Multi-Language Meta titles and description for Categories
- Multi-Language Meta titles and description for CMS Pages
- Multi-Language Meta titles and description for Products

## Installation Instructions

---

1. Go to Modules → Modules → Click Add a new module → Browse for Downloaded Module ZIP file and click Upload this module.
2. Make sure Cache is disabled in Advance Parameters → Performance.
3. Go to Modules → Modules → Click SEO on left Tab group, Scroll down and find FME Advance SEO and click Install.

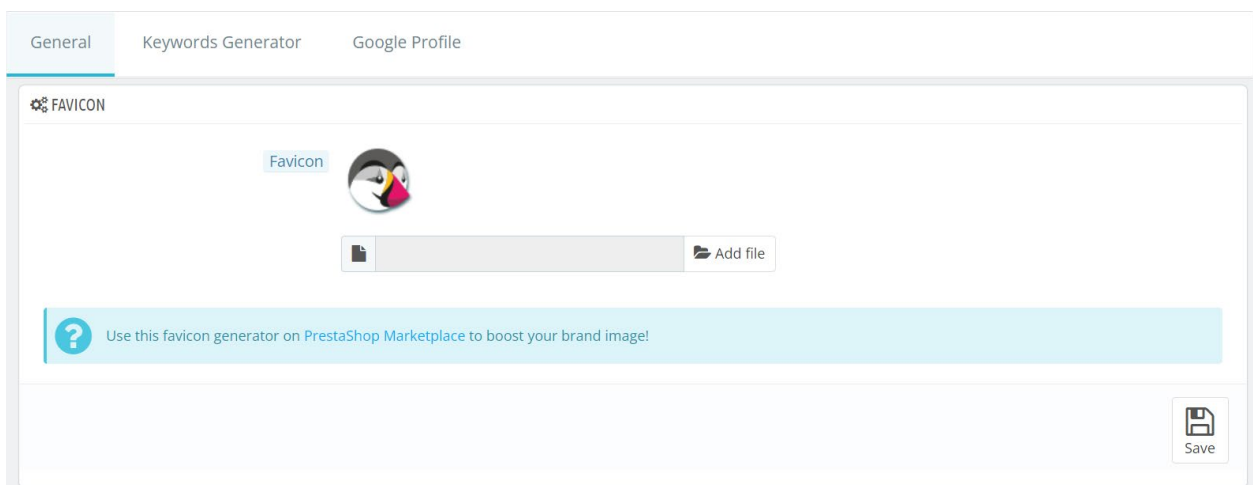

## User Guide

---

### Module Configuration

#### Favicon Update

1. Go to Backoffice → On left hand side click SEO Configurations → General → Favicon
2. Upload your favicon logo

## Homepage SEO

1. Go to Backoffice → On left hand side click SEO Configurations → General → Homepage SEO
2. Use default or add new meta titles, meta description and meta keywords

Make sure your metas are properly setup and are related to the niche of your website. To understand further please visit following [link](#).

**Note:** As Homepage is usually a single entity so automatic meta generator is not available.

HOME PAGE SEO

Enable Below Title?  YES  NO

Home Meta Title  en ▼  
*Please enter a short but meaningful title.*

Enable Below Description?  YES  NO

Home Meta Description  en ▼  
*Please enter a short but meaningful description.*

Enable Below Keywords?  YES  NO

Home Meta Keywords  en ▼  
*Please enter keywords separated by comma , .*

 Save

## Category Page SEO

1. Go to Backoffice → On left hand side click SEO Configurations → General → Category Page SEO
2. Enable and enter meta title and meta description for category pages

**⚙️ CATEGORY PAGE SEO**

Enable Below Title?  YES  NO

Category Meta Title  en ▼

Any text of your choice with these keywords can be used: *categoryname, parentcategory, shoptitle*

Enable Below Description?  YES  NO

Category Meta Description  en ▼

Any text of your choice with these keywords can be used: *categoryname, parentcategory, shoptitle*

 Save

### How to use automatic meta generators

You can also automate the process of generating metas for category pages as well. There are three variables that you can use i.e. Category Name, Parent Category and Shop Titles. All metas are multilingual.

### Auto Meta Title for Category Pages:

1. Write the Meta Titles using variables mentioned. see examples below.

#### Example 1:

Best Seasonal (**categoryname**) For (**parentcategory**) Brought to You by (**shoptitle**)

This will set the meta titles as

Best Seasonal **Blouses** For **Women** Brought to You by **Armani**

### Auto Meta Descriptions for Category Pages:

1. Write the Meta Descriptions using variables mentioned. See examples below.

#### Example 1:

Latest and Greatest Styles (**categoryname**) from (**shoptitle**). Get an amazing discount using special promo.

This will set the meta description for category pages as:

Latest and Greatest Styles For **Women** from **Amazon**. Get an amazing discount using special promo.

## Product Page SEO

1. Go to Backoffice → On left hand side click SEO Configurations → General → Product Page SEO
2. Enable and enter meta title and meta description for product pages

**PRODUCT PAGE SEO**

Enable Below Title?  YES  NO

Product Meta Title  en ▼

Any text of your choice with these keywords can be used: [productname](#), [productcategory](#), [productdesc](#), [productshortdesc](#), [productreference](#), [productmanufacturer](#), [productfeature](#), [productretailpricewithtax](#), [productretailpricewithouttax](#), [productspecificpricewithtax](#), [productspecificpricewithouttax](#), [productreduction](#), [shoptitle](#)

Enable Below Description?  YES  NO

Product Meta Description  en ▼

Any text of your choice with these keywords can be used: [productname](#), [productcategory](#), [productdesc](#), [productshortdesc](#), [productreference](#), [productmanufacturer](#), [productfeature](#), [productretailpricewithtax](#), [productretailpricewithouttax](#), [productspecificpricewithtax](#), [productspecificpricewithouttax](#), [productreduction](#), [shoptitle](#)

Product URL Rule  en ▼

Please use dash - for spaces and / where needed.  
Any of the below parameters can be used: [{id}](#), [{id\\_product\\_attribute}](#), [{rewrite}](#), [{ean13}](#), [{category}](#), [{categories}](#), [{tags}](#), [{reference}](#), [{manufacturer}](#), [{meta\\_keywords}](#), [{meta\\_title}](#), [{supplier}](#), [{price}](#)  
[{id}](#), [{id\\_product\\_attribute}](#), [{rewrite}](#) Are required parameters.

### How to use automatic meta generators

It is a very tiresome job to write metas for all the product pages. Especially if you have hundreds of products. SEO Optimizer takes care of this problem by using variables. You can use these variables to generate very effective metas. You can also select the desired language for each of the metas.

Product Meta Title

Choose language:

### Auto Meta titles for product page:

1. Write the Meta Title and in place of product name use one of the variables mentioned using examples below

**Example 1:**

Buy (variable product name) By (variable product manufacture) For Only (variable retail price) at (Shoptitle)

This will set the meta titles as:

Buy **Black T-Shirt** By **Addidas** For Only **\$20.00** at **Amazon**

**Example 2:**

Amazing Onetime Sale on (variable product name). Get(productreduction) Discount

This will set the meta titles as

Amazing Onetime Sale on **Black T-Shirt**. Get **\$5.00** Discount

Auto Meta Description for product page:

1. Write the Meta Descriptions using variables as explained in the example below:

Enable Below Description? YES NO

Product Meta Description  en ▼

Any text of your choice with these keywords can be used: *productname, productcategory, productdesc, productshortdesc, productreference, productmanufacturer, productfeature, productretailpricewithtax, productretailpricewithouttax, productspecificpricewithtax, productspecificpricewithouttax, productreduction, shoptitle*

**Example 1:**

Now you can get hold of our latest (variable product name) By (variable product manufacture) only at (Shoptitle)

This will set the meta titles as

Now you can get hold of our latest **Black T-Shirt** By **Addidas** only at **Amazon**

Product URL Rewrite Rule:

1. Use variables mentioned below to create product page URL rewrite rules, see example below:

Product URL Rule

Please use dash - for spaces and / where needed.  
Any of the below parameters can be used: *{id}, {id\_product\_attribute}, {rewrite}, {ean13}, {category}, {categories}, {tags}, {reference}, {manufacturer}, {meta\_keywords}, {meta\_title}, {supplier}, {price}*  
*{id}, {id\_product\_attribute}, {rewrite} Are required parameters.*

**Example 1:**

`{category:/{id}{-:id_product_attribute}-{rewrite}-{supplier}.html`

This will set the meta titles as

`https://advseo.bestprestashopmodules.net/en/home/10-laptop-skin-addidas.html`

**Example 2:**

`{category:/{id}{-:id_product_attribute}-{rewrite}-{supplier}-{price}.html`

This will set the meta titles as

`https://advseo.bestprestashopmodules.net/en/home/10-laptop-skin-addidas-20.html`

**Note:**

`{id}`, `{id_product_attribute}`, `{rewrite}` are required parameters.

if you wish to remove ID than please use this module:

[Pretty URLs](#)

## CMS Page SEO

1. Go to Backoffice → On left hand side click SEO Configurations → General → CMS Page SEO
2. Enable and enter meta title and meta description for product pages

### How to use automatic meta generators

As for the product pages, you can also automate the process of generating metas for CMS pages as well. There are two variables that you can use i.e. Page Title and Shop Titles. All metas are multilingual.

### Auto Meta Title for CMS Pages:

1. Write the CMS Meta Titles using variables mentioned. see examples below.

#### Example 1:

(pagetitle) Page For (shoptitle)

This will set the meta titles as

Contact Us Page for Amazon

### Auto Meta Descriptions for CMS Pages:

1. Write the Meta Descriptions using variables mentioned. See examples below.

#### Example 1:

This is a (pagetitle) Page For (shoptitle).

This will set the meta titles as

This is a Contact Us Page for Amazon

## How to Use Multibyte Keyword Generator

Our advance multibyte keyword generator will automatically generate keywords from the content of the specific page. It used advance algorithm to generate and insert related meta keywords.

1. Go to Backoffice → On left hand side click SEO Configurations → Keywords Generator
2. Select the pages for which you want to auto generate keyword

⚙️ AUTO KEYWORDS GENERATOR

Generate keywords for Products	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
Generate keywords for Categories	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
Generate keywords for CMS Pages	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO

3. Fill in the options with the number of words for each word as well as the repetition. Each option has brief explanation.

### Example:

Single Word Minimum Length

Minimum length of single words

Single Word Minimum Occurance

Minimum occurance of single words

2 Words Minimum Length

Minimum length of words for 2 word phrases; value 0 will DISABLE !!!

2 Words Minimum Phrases Length

Minimum length of 2 words phrases

2 Words Phrase Minimum Occurance

Minimum occurance of 2 words phrase

3 Words Minimum Length

Minimum length of words for 3 word phrases; value 0 will DISABLE !!!

3 Words Minimum Phrases Length

Minimum length of 3 words phrases

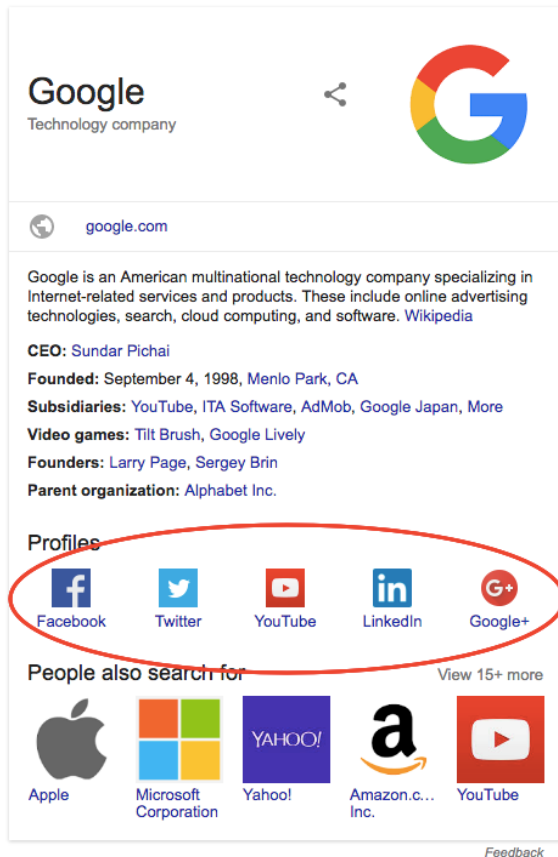

3 Words Phrase Minimum Occurance

Minimum occurance of 3 words phrase

## How to Configure Google Social Profiles

You can also configure Google Social Profiles using SEO Optimizer. You can enhance the appearance and coverage of your official website and presence in Search results by first establishing it with Google. By adding structured data markup to your site, you can enable more of your site's functional and visual elements to appear directly in results and in Knowledge Graph cards. This makes it easier for users to recognize your official site and reach information you provide more easily when they search.

1. Go to Backoffice → On left hand side click SEO Configurations → Google Profile
2. Fill in all the details for your site i.e. URL, Phone Number, Social media profile links

## How to Configure Google Search Bar

SEO Optimizer lets you configure the search bar in google rich snippets. This enables the searcher to search within your site from the search engine results page and can be found underneath the meta description. Searching for content will be easier because the searcher reaches their goal with one less step.

### eBay: Electronics, Cars, Fashion, Collectibles, Coupons and More

1. Go to Backoffice → On left hand side click SEO Configurations → Google Profile
2. Scroll down to find “GOOGLE COMPANY PROFILE”
3. Enable Search Bar and Site Name
4. Enter your website name and alternate site name

## External Link Management

SEO Optimizer module gives you the option to manage all the outgoing links from your site. You can add follow or no follow tag to whole site with a single click.

1. Go to Backoffice → On left hand side click External Link NoFollow
2. Enable external link nofollow to add nofollow tag to all the outgoing links
3. Select Follow to add the follow tag to the links
4. Enable external links Targets
5. Select if you want to open external links on same window or new one
6. Option to add rel attributes
  - a. External
  - b. Noopener
  - c. norefferrer
7. You can also exclude specific domains from the application of these settings

### EXTERNAL LINKS NOFOLLOW SETTINGS

Enable External Links nofollow:  YES  NO

Overwrite External Links nofollow/follow:  YES  NO

External Link follow/nofollow?  nofollow  follow

Enable External Links target:  YES  NO

Overwrite External Links target:  YES  NO

External Link Open?  New Window  Same Window

Add extra rel attributes  Add external  Add noopener  Add norefferrer

Exclude Domains

Do NOT use http, https OR www. Separate multiple values with comma , and with no spaces after OR before.

## Internal Link Management

You can create internal linking using our Internal Link Management option. With selecting a few options this module will automatically create internal links. Internal links are those links that point to another page of the same site. This not only helps you to direct your visitors to other important pages of your site but at the same time, it also affects the SEO in a positive way. This is also one of the most effective techniques to increase the on-page time of your site also known as dwell time.

1. Go to Backoffice → On left hand side click SEO Internal Linking
2. Click on + button to create a new rule
3. Enable the option and add title for this rule
4. Select the color for your linked text
5. Select if you want to open the page in same window or new
6. Select the number of times you want the linking to be done
7. Select target page type
8. Enter the url that you want to be linked. This will be the page user will visit when he/ she clicks on the linked text
9. Enter words that will be linked

**ADD/EDIT SEO INTERNAL LINKING**

\* Status  YES  NO

Title  en ▼  
*It will be also used as title attribute of href tag.*

Link Color    
*It will be color of href tag.*

Open in new window  YES  NO

Add Nofollow  YES  NO

Number of replacements   
*Number of replacments per page, if this value is 1 than only first found text will be linked.*

\* Target Page Types  Home Page  
 CMS Pages  
 Product Pages  
 Category Pages

\* Target Link  en ▼  
*It will used as link for href tag.*

\* Keywords   en ▼  
*To add words, write something, and then press the "Enter" key OR comma.*

## How to use Sitemap Generator

A sitemap is a file where you provide information about the pages on your site and the relationships between them. Search engines like Google read this file to more intelligently crawl your site. A sitemap tells the crawler which files you think are important in your site, and also provides valuable information about these files: for example, for pages, when the page was last updated, how often the page is changed, and any alternate language versions of a page.

Using SEO Optimizer, you can automate the process of sitemap generation. You can generate sitemaps in multiple language and for multiple sites.

1. Go to Backoffice → On left hand side click Sitemap Generator
2. On the top it will be showing your last generated sitemaps in different languages

**CURRENT SITEMAPS**

Base Sitemap URL in your Google Webmaster account:  
[http://advseo.bestprestashopmodules.net/1\\_index\\_sitemap.xml](http://advseo.bestprestashopmodules.net/1_index_sitemap.xml)

- [1\\_en\\_0\\_sitemap.xml](#)
- [1\\_fr\\_0\\_sitemap.xml](#)
- [1\\_de\\_0\\_sitemap.xml](#)
- [1\\_es\\_0\\_sitemap.xml](#)
- [1\\_it\\_0\\_sitemap.xml](#)
- [1\\_nl\\_0\\_sitemap.xml](#)
- [1\\_pl\\_0\\_sitemap.xml](#)
- [1\\_ru\\_0\\_sitemap.xml](#)

Your last update was made on this date: Fri, 25 Jun 2021 02:15:43 -0400

You can use Cron Job Link: <http://yourdomain.com/?fc=module&module=advanceseo&controller=cron&token=2041889249985e3f29183fed870df20f>

3. Scroll below and select pages that you want to be included in your site map i.e all urls, only product page urls, only CMS page urls etc
4. Select the shop as the module is multi-shop supported
5. Select the update frequency from hourly, daily, weekly, monthly or yearly
6. Check/ Uncheck to include images
7. If you are using CDN(Content delivery network) for images and want to include those in the sitemap as well, check CDN option
8. Checking “Ping Search Engine for new sitemap” will automatically ping google each time new sitemap is generated
9. If you want to exclude specific pages from sitemap you can select them by checking on them
10. Generate

**GENERATE NEW SITEMAPS**

Sitemap to generate:

Select Shop:

Update Frequency:

Select Options:

- Include images also from Server
- Using CDN for images?
- Ping Search Engines for new sitemap?

Select Pages you DO NOT want in sitemap.

## How to use Robot Generator

A robots.txt file tells search engine crawlers which pages or files the crawler can or can't request from your site. This is used mainly to avoid overloading your site with requests.

Using SEO Optimizer, you can generate and edit Robot.txt.

1. Go to Backoffice → On left hand side click Robot Generator
2. On top it will show your already generated robot.txt file
3. Disallow/ allow the pages that you want google to crawl or not to crawl.
4. Save

```
# robots.txt automatically generated by PrestaShop e-commerce open-source solution
# http://www.prestashop.com - http://www.prestashop.com/forums
# This file is to prevent the crawling and indexing of certain parts
# of your site by web crawlers and spiders run by sites like Yahoo!
# and Google. By telling these "robots" where not to go on your site,
# you save bandwidth and server resources.
# For more information about the robots.txt standard, see:
# http://www.robotstxt.org/robotstxt.html
User-agent: *
# Private pages
Disallow: /*?orderby=
Disallow: /*?orderway=
Disallow: /*?page=
```

## How to use Redirects

A redirect is a way to send both users and search engines to a different URL from the one they originally requested. The three most used redirects are 301, 302, and 303.

301, "Moved Permanently"—recommended for SEO

302, "Found" or "Moved Temporarily"

303, "See Other" Not generally used

If you want to learn more about redirects, follow this [link](#).

1. Go to Backoffice → On left hand side Redirects
2. Click on "Add" to add a new redirect
3. Select the type of redirect
4. Enter Target URL
5. Enter Point to URL
6. Save

MANAGE REDIRECTS

\* Redirect Type

\* Target URI   
*Use only URI like /aboutus OR /help-us*

\* Point to URL

## How to use Index-Follow

Using SEO Optimizer, you can also manage index and follow management for CMS and Category pages. The noindex directive is an often-used value in a meta tag that can be added to the HTML source code of a webpage to suggest to search engines (most notably Google) to not include that particular page in its list of search results.

The nofollow directive is an often-used value in a meta tag that can be added to the HTML source code of a webpage to suggest to search engines (most notably Google) not to pass link equity through any links on a given webpage.

1. Go to Backoffice → On left hand side Manage Index-Follow
2. Go to CMS Category page and allow/disallow Index and Follow
3. Go to CMS pages and allow/disallow Index and Follow
4. Go to Catalog Category page and allow/disallow Index and Follow for your desired categories.
5. Save

The screenshot shows a web interface titled "CMS PAGES". It contains a table of settings for various CMS pages. Each row has two columns of radio button options: "INDEX" and "NO INDEX" on the left, and "FOLLOW" and "NO FOLLOW" on the right. The "NO INDEX" and "NO FOLLOW" options are currently selected. A "Save" button is located at the bottom right of the interface.

Page Name	INDEX	NO INDEX	FOLLOW	NO FOLLOW
Delivery	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Legal Notice	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

## How to use Social Media Tags

The point of using social meta tags is to control the way your content is displayed in feeds rather than letting Facebook and Twitter generate the headline, description and image for you. You can easily manage social media tags for Facebook and twitter by SEO optimizer. Use variables to generate creative meta titles and description which will be automatically displayed whenever the link is placed on facebook or twitter.

### Meta Tags for Twitter:

1. Go to Backoffice → On left hand side Manage Social Tags
2. Enable Twitter Card Tags
3. Enter your site twitter username
4. Using variable below create a Title tag
5. Using variable create meta description
6. Save

### Example

Setting these options for twitter:

Enable Twitter Card Tags  YES  NO

Twitter Username

Title

Description

Will show on twitter as:

Meta Tags for Facebook:

1. Go to backend → Advance SEO → Manage Social Media Tags
2. Enable Facebook Tags
3. Enter your facebook admin ID
4. Using variable below create a Title tag
5. Using variable create meta description
6. Save

Example:

Setting these options for facebook:

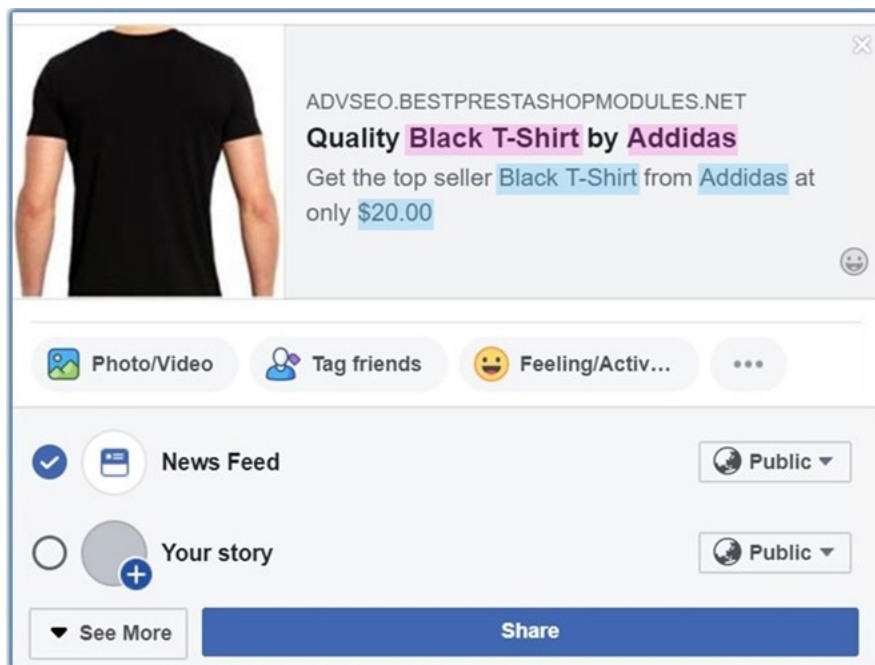

Enable Facebook Tags  YES  NO

Facebook Admin ID   
Please use numeric Facebook Admin ID

Title

Description

Will show on Facebook as:

## Disclaimer

---

It is highly recommended to backup your server files and database before installing this module.
